PHASE0-PAGE-ONE | Synthetic experiment, 2026

Three groups; four time points; six independent samples per cell.

Response measurements are synthetic and use arbitrary units.

Table 1. Experimental design

Group	Days	n per day
Control	0, 7, 14, 21	6
Treatment A	0, 7, 14, 21	6
Treatment B	0, 7, 14, 21	6

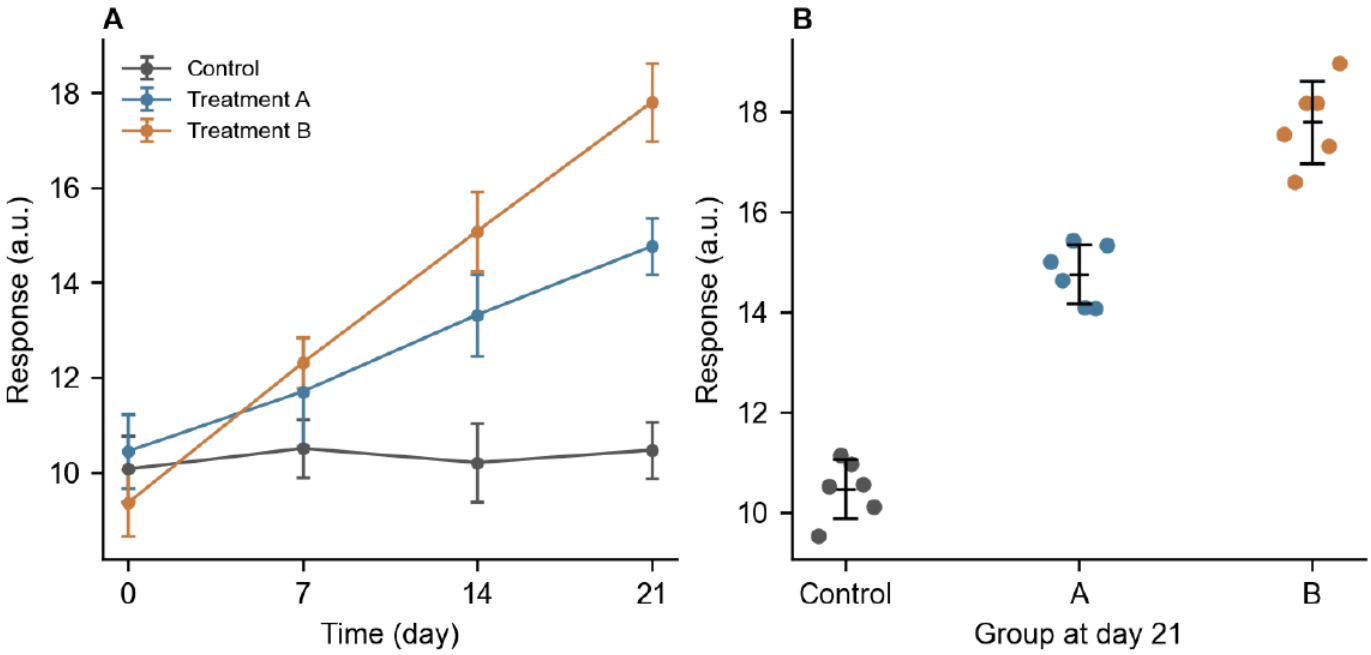

Figure 1. Synthetic response over time and distribution at day 21.

Points and error bars show descriptive values; error bars denote SD.

Methods and provenance

PHASE0-PAGE-TWO | Mean response calculation

The sample mean is computed from n independent observations:

$$\bar{x} = \frac{1}{n} \sum_{i=1}^{n} x_i$$

The seed and data version are retained for reproducibility.
